

SEA BREATHE

Introducing the world-famous electric snorkel

One and Two Diver Float Units

Model Numbers 1300-FAMS and 2300-FAMS from SeaBreatheDiving.com

“Diving can’t get any easier than this! Sea Breathe allows me to dive down to 25 feet without the weight of a scuba tank. I’ve been using mine for ten years!”

Why Sea Breathe?

Our philosophy is “why carry scuba tanks if you don’t have to?” Traditionally divers have had to carry enough oxygen for their whole dive on their backs, at a weight of up to 20kg per 45 minutes. Not only is this heavy but it’s a barrier to working or having fun under water. The Sea Breathe solution is both simple and sophisticated. Our innovative electric snorkels pump air down from the surface, running on rechargeable batteries, backed by double-protection safety features to ensure a steady flow.

Sea Breathe can operate on the deck of your yacht (see our Deck Units 130-DAMS and 230-DAMS) or, for extra flexibility from a floating buoy unit, for either a single diver or for two people diving together.

Who uses it?

Sea Breathe has already built up a strong following from a loyal customer base in Canada and the USA. Commercial divers choose Sea Breathe because of the flexibility it offers. Shipyards and yacht owners choose Sea Breathe to avoid the cost of dry-docking for minor repairs and maintenance, while pool designers have come to appreciate the advantages of being able to correct defects below the surface without draining down. Above all diving enthusiasts from eight to eighty use Sea Breathe because it’s fun, allowing them to appreciate the natural beauty beneath the waves. It’s specially popular in resorts and at clubs and hotels, because people can get diving quickly at their leisure, often as a couple!

Fact me!

Sea Breathe is designed for maximum safety and durability. It uses only the highest grade components.

- Self-contained 12 volt rechargeable battery housing*
- 30 foot flexible hoses with quick release couplings
- High- and low-pressure relief valves to save energy
- Dual air filtration with reliable diaphragm pump construction
- Folding air reservoir for added safety
- Anodized to prevent corrosion, with all stainless steel valves
- Virtually maintenance free, with a spares pack as standard
- Tough polyethylene case and quick-dry hose carrying bag

*Customers are normally advised to obtain the batteries locally to avoid the high cost of shipping.
